Animal Health Care

[www.dedeks.com](http://www.dedeks.com)

[www.dedeks.com](http://www.dedeks.com)

The formation of a healthy society, which people have attached indispensable importance to since the existence of life until today, can be formed by the combination of many parameters.

The main parameters in ensuring the complete physical, spiritual and social well-being of the society are human health, animal health, plant health and environmental health.

Dedeks was established in Istanbul in 2022 to conduct research in the fields of health, especially Animal Health and Human Health, to develop researched products, and to ensure that products that have completed their development are easily accessible.

Dedeks first offered its products to its customers in the Turkish market and quickly gained acceptance and expanded its domestic distribution channels. It started exporting in the same year and exports to European, Middle Eastern and Asian countries in the world market. It tries to create a distributorship infrastructure in these countries by endearing its products to its stakeholders in Europe, West Asia and the Middle East.

## Our values, led by principles

One of the unchanging principles of Dedeks is Respect for Humans, Nature and Animals.

Animals are an important factor of nature. Sometimes it joins people's spiritual values as a friend, and sometimes it joins the food chain. In addition, animals are the main factor in the sustainable cycle of nature.

- Diagnosis Diagnosis Treatment
- Protection of Animal Health
- Care and Feeding of Animals Our main areas of work are
- Customer Focus
- Entrepreneurship
- Human Resources
- R&D
- Technical data

Trying to contribute with such values and developing innovations are among our main goals.

## Creates Common Value with its Social Responsibility Approach

Dedeks aims to increase sustainability, animal welfare, and therefore social and economic welfare of the society in the fields of rural development, water and nutrition, especially in Turkey and throughout the world.

A collection of medical supplies is arranged on a light-colored wooden surface. In the foreground, a blue stethoscope with silver chest pieces lies on a green surgical cloth. Next to it is a clear plastic syringe with a green plunger, marked with numbers 2, 4, 6, 8, 10, and 12. A roll of white bandage is also visible. In the background, there are more medical items, including a blue bottle with a green cap and a roll of white bandage. A red semi-transparent banner is overlaid on the right side of the image, containing the company name and tagline.

Medical and Consumables

DEDEKS® DUAL-FREQUENCY STETHOSCOPE

The DEDEKS® Dual-Head Stethoscope is a diagnostic tool that can be used for both humans and animals. Particularly in animals, detecting and assessing the functions of internal organs located in the abdominal cavity, such as the lungs, heart, and liver, is of great importance during the diagnosis of diseases.

With excellent sensitivity in both noisy and quiet environments, this stethoscope will greatly facilitate the prognosis of diseases and the physician's diagnosis and assessment.

The DEDEKS® Dual-Frequency Stethoscope, with its dual tubes and precise diaphragms, helps you accurately identify functional sounds in both pediatric and adult settings. Two 76 cm long tubes isolate the sound coming to each ear individually. The metal part where the drums are located can be rotated left and right to allow for both adult and pediatric use. The earpieces, made of silicone, are comfortable and can be customized for an individual fit with the included spare parts.

- Specifications:
- Dual-Frequency Stethoscope
  - Equipped with a 24.75 mm pediatric and a 38 mm adult drum
  - 76 cm long tubing • Drums can be used on both sides
  - Additional spare parts are available
  - Includes 1 User Name Writing label
  - 2 diaphragms • 2 Plastic drums
  - 4 spare earpieces are included
  - Intended for professional use
  - Should be cleaned after each use

DEDEKS® SELF-ADHESIVE ELASTIC BANDAGE

The Self-Adhesive Elastic Bandage is an elastic bandage made from nonwoven melted polyester fabric with pores. It is designed to adhere only to itself, not to animal or human skin, thanks to an adhesive coating. This makes it easy to apply and remove from the body without causing discomfort.

The bandage can be easily applied to all curved and contoured areas of the body, including joints. Its non-absorbent structure prevents it from holding liquids and ensures it remains non-slip and non-crumpling. The porous design allows air circulation in the wrapped area.

The Self-Adhesive Elastic Bandage possesses extra adhesive strength, making it suitable for even the most challenging areas to wrap. After use, any remaining portion can be torn off and stored in a sealed container for future use.

- Specifications:
- Made from nonwoven fabric
  - Elastic in nature
  - Contains latex
  - Designed for single use (preferably, can be reused)
  - Easy to tear
  - Adheres easily
  - Does not stick to hair or skin
  - Suitable for use in all seasons

DEDEKS® BIRTHING AND ARTIFICIAL INSEMINATION GEL

DEDEKS® Birthing and Artificial Insemination Gel is a transparent water-soluble lubricant that can be comfortably used in gynecological, endoscopic, colonoscopic, retroscopic examinations, and catheter applications.

It should be applied in an amount that forms a film layer and spread with the help of gloves.

For rectal examinations, artificial insemination, vaginal interventions, and especially during childbirth, it provides comfort in examinations for both humans and animals, thanks to its lubricating properties.

DEDEKS® Birthing Gel facilitates the ease of removing offspring that may be stuck in the birth canal or when amniotic fluids have dried up during childbirth.

DEDEKS® Artificial Insemination Gel provides ease of application during rectal administration of artificial insemination.

- Specifications:
- 1000 ml of Birthing and Artificial Insemination Lubricating Gel
  - Contains glycerin and is water-based
  - Transparent in color
  - Provides long-lasting lubrication
  - No reported side effects
  - Suitable for use in childbirth and artificial insemination
  - Can be used in rectal and vaginal examinations for human health

Veterinary Clinic Equipment

DEDEKS® AUTOMATIC INJECTOR

In livestock farming, the importance of vaccination and other mass medication applications increases with each passing year. DEDEKS® Automatic Injector, designed to provide comfort for both animals and healthcare professionals during processes like vaccination, saves time for practitioners in cattle, sheep, pig, poultry, and fish farms with large animal populations, thanks to its compact design.

Its ergonomic structure ensures a firm grip and easy application during injections, preventing slippage from the hand. DEDEKS® Automatic Injector allows injections from very small volumes up to 5 ml, depending on the product model. The metal or plastic-headed needle tips can be securely attached and used with the fixed Luer-Lock structure.

With the adjustment screw at the back of the injector, you can control the volume you want to draw into the reservoir and inject, such as:

- 0.1 ml – 1 ml range
- 0.2 ml – 2 ml range
- 0.5 ml – 5 ml range

The basket structure can adapt to bottles up to 100 ml, partially protecting medication or vaccine bottles in case of impacts. After each use, DEDEKS® Automatic Injector should be cleaned. When maintenance is performed using the spare parts and maintenance kit inside, it offers an economical service life.

Key Features:

- Made from ABS plastic for the reservoir.
- Adjustable injection volume.
- Luer Lock needle compatibility, suitable for all needle tips.
- Easily replaceable bottle compatibility.
- Suitable for use in cattle, sheep, pigs, poultry, and fish.
- Includes spare maintenance parts.
- Includes a user manual.
- A product that offers both price and performance benefits.

DEDEKS® ADJUSTABLE CHAMBER INJECTOR

In livestock farming, vaccination applications for cattle, sheep, poultry, and aquatic animals are of vital importance. These animals that contribute to the human food chain are desired to be made more resistant to many diseases with the increase in preventive veterinary medicine and the advancement of vaccine technologies.

With the DEDEKS® Adjustable Chamber Injector, we can easily administer vaccines to animals quickly.

It can be easily adjusted with the adjustment wheel, allowing for various dosage options, such as:

For example:

- Between 0.5 ml and 25 ml
- Between 1 ml and 50 ml

After the medication or vaccine is loaded into the reservoir, injections can be made at the desired volume using the adjustment wheel. The DEDEKS® Adjustable Reservoir Injector requires few spare parts and has an economical lifespan when maintained with a maintenance kit, making it cost-effective.

- It has a reservoir made of ABS plastic.
- It has an aluminum handle.
- It is compatible with Luer Lock needles, suitable for all needle tips.
- It is resistant to chemical drugs.
- Suitable for use with cattle, sheep, pigs, poultry, and fish.
- High dosage tolerance (<1%).
- Includes a user manual.
- A product that offers a good balance between price and performance.

## DEDEKS® METAL AUTOMATIC INJECTOR

Vaccines and medications are formulated in various forms, such as viscous, aqueous, oily, or heavy solutions, depending on the density of the active substance or raw material. DEDEKS® Metal Automatic Injectors, designed for the injection of high-viscosity suspensions in serial applications, are not only durable but also suitable for long-term use. Their replaceable parts ensure they remain robust and reliable, just like they were on the first day of use.

DEDEKS® Metal Automatic Injectors are available in variations with hoses, bottle adapters, or twin configurations, catering to the needs of veterinarians and practitioners. They can be adjusted and used at the desired volume with adjustable screws, such as:

- 0.1 ml – 1 ml range
- 0.2 ml – 2 ml range
- 0.5 ml – 5 ml range

After each use, DEDEKS® Metal Automatic Injectors should be cleaned. When maintenance is performed using the spare parts and maintenance kit inside, they offer an economical service life.

### Key Features:

- Metal casing and piston-driven
- Glass reservoir
- Adjustable injection volume
- Compatible with Luer Lock needles
- Compatible with all needle tips
- Suitable for use in cattle, sheep, pigs, poultry, and fish
- Suitable for all weather conditions
- Suitable for a wide range of liquids and suspensions
- Includes spare maintenance parts
- Includes a user manual
- Long-lasting and a performance product suitable for extended use

## DEDEKS® METAL HYPODERMIC NEEDLES

In animal health, there are significant variations in body structure and live weight, leading to differences in injection needles tailored to each body type and live weight.

For example, a fish may weigh as little as 250 grams, while a bull can weigh up to 2000 kilograms.

The DEDEKS® Metal Hypodermic Needle Tip, with its sharp tip and stainless steel construction that is safe for health, is used for injections in various animal species such as cattle, sheep, pigs, poultry, fish, camels, and more. It is suitable for both single-use and multi-use automatic injectors.

DEDEKS® Steel Needle Tips are manufactured in various appropriate sizes for subdermal, intradermal, and intramuscular applications.

### Key Features:

- Made from stainless steel.
- Needle tips are sharpened using special technology.
- Suitable for reuse when properly disinfected.
- Each set includes 12 needle tips within a plastic cassette.
- A steel rod for clearing blockages is included in each plastic cassette.
- Needle tips are marked in millimeters for precise measurement.
- Labels include color and barcode information in accordance with ISO standards.
- Each cardboard box contains 12 plastic cassettes.
- Each cardboard box contains a total of 144 needle tips.

## DEDEKS® DISPOSABLE HYPODERMIC NEEDLE

The injection process involves the administration of vaccines, drugs, and vitamins into the living body to correct or support disrupted physiological functions in both human and animal health.

Injection procedures should be carried out with care and precision, as they have a wide range of applications in human and animal health. Needle tip selection depends on various factors such as the injection method (intramuscular, intravenous, subdermal, etc.), the composition of the drug or vaccine, and the injection site.

DEDEKS® Disposable Hypodermic Needle Tips are produced according to CE standards and are sterile. They are suitable for both disposable and multi-use automatic injectors.

Key Features:

- Made from stainless steel.
- Needle tips are sharpened with special technology.
- The base is made of polypropylene.
- Each needle tip has a transparent polypropylene protective cap.
- Each needle tip is individually packaged in a sterile manner.
- 100 needle tips are included in one box.
- Each plastic cassette includes a needle unblocking steel rod.
- Labels include color and barcode information following ISO standards.
- Sterile, non-pyrogenic, and non-toxic.

## DEDEKS® HOOF RENET

It's all about the small details, like hoof renet. Many livestock farmers understand just how crucial proper hoof renet is for animals.

While animals can't vocalize their nail-related issues like humans, their body language can clearly indicate significant problems. Specifically, cattle, sheep, and horses require regular hoof renet. Neglecting this aspect can lead to significant losses in productivity and result in both financial and emotional damage to the operation.

The Hoof Renet is typically used by veterinary health technicians, veterinarians, or trained breeders. Its sharp structure allows you to easily trim hooves with minimal effort. The ergonomic handle design ensures you can make the most of your strength.

Key Features:

- Lightweight and compact
- Made from rust-resistant steel
- Durable and can be used for many years
- Can be sharpened when it loses its edge

Cat. No.	Model	Length	MOQ	Piece / Unit	Barcode	Packaging

### DEDEKS® 6 BLADE HOOF CUTTING-TRI

Nail care is a natural necessity for every creature with nails. Regular nail maintenance at specific intervals positively impacts the quality of life.

The DEDEKS® 6-Blade Hoof Cutting Trimming Disk allows for quick maintenance when attached to a palm grinder motor in cattle and horse species.

Its aluminum alloy body provides a lightweight and comfortable working experience, while the diamond blades perform a smooth and non-damaging filing.

The DEDEKS® 6-Blade Nail Cutting Disk has a symmetrical structure with 6 blades, and each blade is accompanied by two holes. This design makes it easy to clean off dirt and foreign particles.

The blades can be used on both sides.

- Made from aluminum alloy metal
- Contains 6 blades
- Blades are double-sided
- Includes an Allen key as an additional tool
- Lightweight and ergonomic
- Intended for professional use
- Should be cleaned after use

Cat. No.	Model	MOQ	Piece / Unit	Barcode	Packaging

V-VL0806	3-Piece Screw Set	10 Pieces	3 / Pieces	8683735910770	3/10

### DEDEKS® 7-BLADE HOOF TRIMMING DISC

Cattle hoof care is a crucial part of cattle health and well-being. Improper care of cattle hooves can affect the comfort and health of the animals and can also lead to injuries or diseases. Here are the basic principles of cattle hoof care:

The beginning of cattle hoof care involves regular observation, where cattle hooves are regularly examined. Cattle hooves should be healthy, with no signs of cracks, breaks, or infection. Additionally, if feces or other foreign materials are trapped under or around the hooves, they should be cleaned.

If the hooves are too long or misshapen, it can hinder the animal's ability to walk and may lead to hoof injuries. Care should be taken during hoof trimming, ensuring not to cut into the live tissue known as the corona (keratin structure). Damaging the live tissue can result in bleeding or infections.

If you lack experience in cattle hoof care or have a large herd of cattle, it's important to seek assistance from a veterinarian or an experienced hoof care specialist. Professional help can make hoof trimming and other hoof care procedures safer and more effective.

The DEDEKS® 7-Blade Hoof Trimming Disc allows for quick maintenance when attached to a palm grinder motor in cattle and horse species.

Its aluminum alloy body provides a lightweight and comfortable working experience, while the diamond blades perform a smooth and non-damaging filing.

The DEDEKS® 7-Blade Hoof Trimming Disc has a symmetrical structure with 7 blades. The blades can be used on both sides.

- Made from aluminum alloy metal
- Includes 7 blades
- Blades are double-sided
- Also includes an Allen key
- Lightweight and ergonomic
- Intended for professional use
- Should be cleaned after use

DEDEKS® CALF VENTILATION ASPIRATOR

Calf ventilation aspirators are devices used in emergency situations, such as cases of respiratory difficulties or neonatal respiratory distress in calves. These devices are employed to support or enhance the ventilation functions of calves. Ventilation issues in calves can arise during birth or in the postnatal period.

The DEDEKS® Calf Ventilation Aspirator is typically utilized for the following primary purposes:

**Ventilation Support:** Calves may not have fully developed respiratory systems or may experience ventilation difficulties during birth. Ventilation aspirators can assist in improving the exchange of oxygen by supporting the ventilation movements of the calves.

**Secretion Clearance:** After birth, calves may accumulate mucus or other secretions in their airways. Ventilation aspirators can be used to clear these secretions and facilitate unobstructed airflow.

**Air Humidification:** Maintaining adequate moisture in the airways of calves is essential. Ventilation aspirators can aid in humidifying the inhaled air.

**Oxygen Therapy:** In situations where calves require oxygen therapy, ventilation aspirators can ensure the effective delivery of oxygen.

Calf ventilation aspirators should be operated by veterinarians or authorized healthcare professionals. These devices are critical for preserving the health and life of calves and necessitate professional training. When confronted with ventilation issues in calves, immediate consultation with a veterinarian is imperative.

- Lightweight and compact
- Constructed from aluminum alloy
- The mask portion is crafted from rubber
- Durable and long-lasting
- Should be cleaned after each use with general cleaning products

DEDEKS® VETERINARY EXAMINATION AND OPERATING ROOM STOOL

DEDEKS® Operating room stools are a special type of stool that surgical teams can use during surgeries. These stools help veterinarians, surgeons, and other surgical team members to work comfortably around the operating table. The height of the stool can be adjusted to be at the same level as the operating table. This allows surgeons and other team members to easily find the correct position during surgery. It is equipped with a base that can rotate 360 degrees. This helps surgeons and team members to comfortably rotate in different directions within the operating area. The seating surface of the veterinary operating room stool is covered with non-slip leather to prevent slipping. Optionally, operating room stools are equipped with arm and backrest support for enhanced user comfort. DEDEKS® Operating room stools have smooth surfaces to facilitate cleaning and disinfection processes. Operating room stools with wheels assist veterinarians and surgeons in moving around the surgical area with ease. Covering or upholstery materials can be easily cleaned and disinfected to maintain the hygiene of the operating environment. Operating room stools are essential for enabling surgical team members to work comfortably and effectively during surgeries. These stools are used around the operating table and other surgical equipment. Operating room stools with different features can be found to meet the needs of each operating environment.

- Key Features:
- Made of stainless steel
  - The seat part is round and has a diameter of 36 cm
  - Covered with cleanable leather
  - Height adjustment is hydraulic and manual
  - Optional model with backrest available
  - Minimum height of 40 cm
  - Maximum height of 60 cm
  - Maximum capacity of 150 kg
  - 2-year warranty for steel components
  - Equipped with steel legs

Cat. No.	Model	MOQ	Piece / Unit	Barcode	Packaging
V-VL050202	Backless Operating Room Stool	9 Pieces	1 / Piece	8683735911074	1/18

## DEDEKS® VETERINARY EXAMINATION TABLE

DEDEKS® Veterinary surgery tables are specially designed tables for animal examination and veterinary surgical procedures. These tables are designed to keep animals in a comfortable position during surgical procedures and to make it easier for the surgical team to perform their work. The veterinary examination table has a stainless steel surface on the top table, which is produced by pressing steel. This allows for easy cleaning and disinfection, as there are no welds in the corners and it has a smooth surface that does not accumulate dirt.

The veterinary examination table can be adjusted in height with a motor, allowing veterinarians and surgeons to use the table at a suitable height. Motorized Trendelenburg movement is offered as an option, allowing for the inclination of the table at the desired angle. It is also designed for fluid flow and drainage, making it easy to remove fluids during surgery. In non-motorized models, Trendelenburg movement is achieved with the assistance of a hydraulic piston.

A serum hanger is provided as standard for serum or blood infusion. Upon request, the table surface can be coated with non-slip covering to prevent the animal from sliding.

Optionally, some veterinary surgery tables are equipped with clamps and restraints to secure animals during surgery. Some models are also equipped with wheels for easy transport and positioning.

Veterinary surgery tables are used in veterinary clinics, hospitals, and surgical centers. These tables are available in different sizes and features, allowing them to be adapted for different animal species and surgical needs. Veterinarians and surgical teams carefully choose the appropriate table based on the type of animal, type of surgery, and clinical requirements.

### Key Features:

- Stainless steel top table
- 144 cm x 64 cm size
- Removable serum hanger
- Motorized height adjustment
- Motorized Trendelenburg adjustment (optional)
- Minimum height of 64 cm
- Maximum height of 125 cm
- Maximum capacity of 120 kg
- 2-year warranty for the motor and steel components
- Fluid flow and drainage outlet
- Static powder-coated frame

## DEDEKS® CALVING AID TOOL VINK MODEL

The DEDEKS® Calving Aid Tool Vink Model is designed to assist in the calving process of large livestock animals, particularly in cases where the calf needs help being delivered from the birth canal.

The difficulty of calving in large animals can be influenced by various factors, including the size and position of the calf, the mother's birth canal, and other anatomical considerations. In such situations, veterinarians and skilled technicians may choose to use the DEDEKS® Calving Aid Tool Vink Model to provide the necessary assistance.

### Key Features:

- Made from high-quality chrome alloy steel.
- Designed as a single-piece unit for durability and reliability.
- Intended for use by skilled professionals.
- Incorrect usage can potentially harm both the calf and the mother.
- The headpiece is removable for ease of use.
- Requires regular disinfection and cleaning after each use.
- Built to withstand long-term use and provide dependable assistance during calving procedures.

DEDEKS® BOVI-DEKS™ Cow Block Adhesive

BOVI-DEKS is a fast-curing, polyurethane-based two-component adhesive developed for bonding wooden or urethane blocks to cow claw. The curing time of the product is between 20 and 30 seconds (at 20°C).

Purpose of usage:

Bovi-deks is designed to accelerate the healing process of cow nail diseases by reducing the pressure on the patient's claw. It is used for gluing wood or urethane based blocks to the solid claw. Preparation of the Claw and Application of the Block: After mechanical maintenance and cleaning of the claw, free horn pieces, dirt and dust are removed. Damp and wet nails are dried. This is important to ensure complete adhesion. Additionally, a rough surface will strengthen the permanence of the block.

The adhesive is applied to the block in a 15 cm strip and quickly adhered to the claw to create a thickness of 3-5 mm and gently pressed for 20-25 seconds. After complete curing in 2 to 3 minutes, it can be pressed on the cow claw. Do not cover areas that are wet, bleeding or infected.

Cartridge Preparation:

Cartridges containing 2 components based on resin and polyurethane have a different component in each chamber. The plug clamp at the tip is opened and the green sealing plug is removed, and the Dedeks Adhesive Mixer tip is installed. It is locked by passing it over the clamp again. Dedeks Adhesive is placed into the application gun and made usable. By holding the tip towards the air at 45 degrees, bubbles are released and the ingredients are mixed in the correct ratio. This is important for correct curing. It is applied on wood or urethane block. The mixer may remain in the cartridge after application. The mixing tip is disposable. The mixing tip is replaced with each new application.

Removing the Block:

Once the diseased claw is fully healed, it can be removed with a chisel or a suitable tool.

Cold and Hot Weather Recommendations:

Bovi-Deks cures for the optimum time at 20°. (20-30 seconds). In cases where the ambient temperature increases, the curing time will shorten.

In this case, the product is put in a water bath, etc. It must be cooled using methods. In cases where the ambient temperature decreases, the curing time will be longer. In these cases, heat can be applied to the claw and block for about 10 seconds. Heat application can be continued for the bonded block to fully cure and harden in 2-3 minutes.

Warnings:

It is recommended to use protective gloves and A1 Type mask during use. Avoid direct contact with hands and eyes during application. In case of possible contact, wash with plenty of water and consult your physician.

For proper storage of the product, keep it at room temperature, protected from sunlight and out of the reach of children.

After the product is finished, dispose of it in accordance with your country's or international regulations.

## DEDEKS® HUGS TEAT TUMOUR EXTRACTOR

Hugs Teat Tumour Extractor is a surgical instrument used in the treatment of wounds caused by tumour, mastitis or tissue damage in large animals. The Conical Opening Membrane is used to open or clean the connective tissue that blocks the milk ducts.

- Used by veterinarians
- Surgery is performed under anesthesia
- Made of stainless steel
- Suitable for use on teats of appropriate size
- The teat and the opening instrument must be sterilized before use
- It should be disinfected and stored after use

Cat. No.	Model	MOQ	Piece / Unit	Barcode	Packaging
V-VL090401	DEDEKS® HUGS TEAT TUMOUR EXTRACTOR	20 Piece	1 / Piece	8683735912668	1/20

## DEDEKS® Tuberculin Caliper

The tuberculin caliper is a precise digital measuring tool used to measure skin thickness reactions in large livestock after an intradermal tuberculin test, aiding in the diagnosis of tuberculosis.

### Features:

- Accurate millimeter measurement with a digital display
- Ergonomic and lightweight design
- Stainless steel material
- Easy calibration and long battery life

### Usage Instructions:

- Sterilize the device.
  - Apply the tuberculin test.
  - Measure the skin thickness after 48-72 hours.
- The measurement results are evaluated by a veterinarian.  
Manual Caliper: In the manual caliper, only the display is not digital, while

## DEDEKS® Eye Hook

The Eye Hook is an important surgical instrument widely used by veterinarians during the birth processes of large animals. It is made of stainless steel, which enhances its durability and hygienic properties. The Eye Hook is designed specifically for the use of veterinarians and features rounded ends, allowing it to be used with minimal harm to the animal's eye.

When this instrument is placed in the calf's orbital sockets, it provides a secure and reliable grip. This enables the veterinarian to assist in the calf's extraction from the birth canal. The birth eye hook is designed to be suitable for the animal's birthing position and is available in various sizes and shapes, allowing it to be used appropriately for calves of different breeds and ages.

- Made of high-quality stainless steel
- Must be used by veterinarians and technicians
- Available in different models based on the animal's breed
- Must be disinfected before use
- Can last for many years if properly maintained

DEDEKS® STRAW TWIZZER

The Straw Twizzer is a tool designed to securely hold 0.25 ml and 0.5 ml sperm straws, thanks to the grooves at its tip. Made of stainless steel, it stands out for its durability and hygienic properties. This easy-to-use forceps facilitate the retrieval and transportation of straws from the goblet during the artificial insemination process.

V-VL0702	DEDEKS® STRAW TWIZZER	20 Pieces	20 / Adet	8683735912750	1/20

DEDEKS® CMT TEST PLATE

The CMT Test is a rapid test solution used to determine the presence of mastitis (inflammation of the mammary gland) in cattle and sheep, as well as to assess the degree of infection based on somatic cell density.

During this test, a white or black cup is used. In the CMT cup, made of plastic material, a milk sample from a different teat is placed in each well, and the test solution is added. Subsequently, evaluation is based on the color change and gel-like consistency of the samples formed.

- The samples should not be from the first milk from the teat.
- The first milk should not be discarded into the barn.
- The product is made of durable plastic material.
- It must be disinfected after each use.
- Samples that indicate mastitis should be properly disposed of, as they contain a high number of bacteria.

## DEDEKS® ARTIFICIAL INSEMINATION TECHNICIAN TANK 6 L.

In animal husbandry, obtaining quality genes is of great importance both commercially and morally. Quality genes are collected and preserved from high-genetic-yield animals through various methods. The most common preservation method is storing them in nitrogen. Sperm stored in 0.25 ml and 0.50 ml straws are inseminated when a suitable recipient is found.

The DEDEKS® Artificial Insemination Technician Tank allows the sperm to move in a mobile manner while maintaining the laboratory environment. Inside the tank, there is 6 liters of nitrogen at -196°C, which, when properly managed, allows the sperm to be preserved in the tank for many years.

### Key Features:

- Lightweight and compact.
- Made from aluminum alloy.
- Equipped with a belt for high strength.
- Canister slots are numbered.
- Slots are provided at the tank base to prevent canisters from settling and shaking.
- Features multi-layer insulation for evaporation control.
- Comes with a leather cover for protection against external impacts.
- Has a lockable lid to prevent unauthorized access.
- The use of a lock is optional.
- Has a capacity of 6 liters.
- Empty weight is 4.8 kg.
- Equipped with 6 canisters.
- Can hold 2244 straws of 0.25 ml or 792 straws of 0.5 ml.
- Static evaporation rate is 0.1 Lt/day.
- Static nitrogen holding time is 61 days.

- Neck diameter is 50 mm.
- Total height is 482 mm.
- External dimensions are 300 mm.
- Canister total length is 120 mm.
- Canister height is 38 mm.
- Comes with a 5-year vacuum warranty.
- Includes a 3-year product warranty.

## DEDEKS® NITROGEN STORAGE TANK 35 L

Nitrogen, also known as nitrogen, is obtained from atmospheric air through the process of reverse osmosis. Nitrogen has many applications, especially in storing cells in laboratories, conducting certain experiments, performing analyses, in dermatology, cryotherapy, and more. It is specifically used for storing liquid nitrogen.

Nitrogen, which is in gaseous form at room temperature, can easily be stored in liquid form in containers such as nitrogen storage tanks or cryogenic storage vessels, making it convenient for use in laboratories and industries.

Nitrogen gas finds extensive use in environments where oxygen is unwanted.

The DEDEKS® Nitrogen Refill Tank 35 L is designed with special insulation materials to maintain a temperature as low as -196°C.

With a capacity of 35 liters, the nitrogen transport container can be easily mobilized by a single person.

The Laboratory Series Liquid Nitrogen Vessel is designed without tin can systems and is specifically used for storing liquid nitrogen in laboratories, dermatology, cryotherapy, and more. It offers the longest-lasting Qf storage.

- Lightweight and compact
- Made from aluminum alloy
- Equipped with a belt for high strength
- No canisters or canister slots
- Features multi-layer insulation for vaporization rate
- Includes a leather cover to protect against external impacts
- Equipped with a lockable lid to prevent unauthorized access
- Lock usage is optional
- Must comply with European Occupational Safety rules when using
- Has a capacity of 35 liters
- Empty weight is 13.2 kg
- Static evaporation loss is 0.12 liters per day
- Neck measurement is 50 mm
- Total height is 672 mm
- Outer dimensions are 451 mm
- Canister height is 38 mm
- Comes with a 5-year vacuum guarantee
- Includes a 3-year product guarantee

Cat. No.	Model	MOQ	Piece / Unit	Barcode	Packaging

## DEDEKS® SOFT TISSUE SURGERY SET

The DEDEKS® Soft Tissue Surgery Set is a product of professional craftsmanship involving world-standard metals, designed to serve Surgeons and Veterinarians. Surgical operations are essential treatment methods for both humans and animals.

The Veterinarian Soft Tissue Set is a high-quality product made from stainless steel. It can be used in various surgical operations, including soft tissue injuries, laparotomy, ovariectomy, and standard traumas.

After each use, it is essential to clean the DEDEKS® Soft Tissue Set. It is recommended to clean it with water to remove coarse dirt and surgical waste and then disinfect it in an autoclave sterilization container.

### Key Features:

- Made from high-quality stainless steel
- Contains 21 different surgical instruments
- A total of 30 pieces
- Can be customized as per requirements
- Not sterile; must be sterilized before use
- Autoclave sterilization is recommended
- Suitable for use in various animal species, including pets, cattle, sheep, pigs, horses, poultry, and wild animals
- Complies with European and Turkish standards
- When properly maintained, it can be used for many years
- Comes with a 2-year warranty

DEDEKS® RUMINANT GENERAL SURGERY SET

The DEDEKS® Ruminant General Surgical Set has been designed for general operations, recto-vaginal operations, cesarean sections, and ruminant-specific procedures such as rumenotomy and abomasal displacement in ruminant animals, and is made available to Surgeons and Veterinarians.

The Veterinary Large Animal General Surgical Set is a product made of high-quality stainless steel.

DEDEKS® Veterinary Large Animal General Surgical Set, Must be cleaned after each use. It is recommended to disinfect it in an autoclave sterilization container after cleaning it from coarse dirt and surgical waste with water.

- Made of High-Quality Stainless Steel
- Contains 11 Different Surgical Instruments
- A Total of 17 Pieces
- Includes an abomasal displacement set
- Customizable upon request
- Not sterile, must be sterilized before use
- Autoclave sterilization is recommended
- Suitable for use with Cattle, Sheep, Pigs, Horses, and Wild Animals
- Complies with European and Turkish Standards

DEDEKS® EYE SURGERY SET

The DEDEKS® Eye Surgery Set is offered to surgeons and veterinary doctors after professional craftsmanship in processing metals to meet global standards.

This Veterinary Eye Surgery Set is a product made from top-quality stainless steel. The DEDEKS® Veterinary Eye Surgical Set can be used in delicate micro operations, particularly those involving sensitive organs like the eye. It provides a precise working area for the eye, thanks to the Barraquer Wire Ecarteur included in the set.

After each use, it is essential to clean the DEDEKS® Soft Tissue Set. It is recommended to clean it with water to remove surface dirt and surgical residues, and then disinfect it inside a sterilization container using an autoclave.

Please note that this translation is based on the provided information, and it's important to ensure proper sterilization and maintenance procedures are followed for the safe and effective use of the DEDEKS® Eye Surgery Surgical Set.

## DEDEKS® DRUG INTAKE CATHETER

A medication administration syringe is a tool used by veterinarians and pet owners alike. These syringes have a soft and flexible structure, making it easy to place them in a pet's mouth.

The DEDEKS® Drug Intake Catheter is designed for small animals.

Key Features:

- Made from PP Material
- Suitable for Cats, Dogs, Lambs, and Goats
- Must be cleaned before and after each use

Cat. No.	Model	MOQ	Piece / Unit	Barcode	Packaging
V-PL030101	Drug Intake Catheter	30 Pieces	1 / Piece	8683735912583	1/30/180

## DEDEKS® CAT HANDLING GLOVES

Our beloved cats and dogs not only provide us with companionship and comfort but also serve humans in various ways. Like any living being, cats have care and examination needs. Despite being cute and affectionate, they can become a bit feisty during grooming.

DEDEKS® Cat Handling Glove aims to minimize the risk of cat bites and scratches for healthcare professionals and individuals who provide care or conduct general examinations. With its design extending up to the elbows, it provides both ease of use and protection up to the forearm.

The DEDEKS® Cat Handling Glove is made from the best parts of cowhide leather, with the inner parts reinforced with different textile components to enhance its effectiveness. It should not be confused with ordinary leather gloves.

This is because the DEDEKS® Cat Handling Glove is manufactured from the finest sections of bovine leather, while ordinary gloves are often made from lower-quality parts that can cause sweating and unpleasant odors. Therefore, it is important for the user's health to use DEDEKS® Cat Handling Gloves.

- Made from natural leather
- Waterproof
- 47 cm long from the middle finger to the elbow
- Wrist width is 14 cm
- The part from the wrist to the elbow is 25 cm
- Each package contains 1 pair of gloves
- Extra support for the thumb and index finger
- Comfortable to wear
- Should be ventilated after extended use
- Should not be cleaned with bleach or similar cleaning agents
- Other traditional cleaning agents can be used

## DEDEKS® POST-OPERATIVE COLLARS

These collars, made from PE material, are used to support the healing process of animals in the post-operative period and prevent them from harming themselves. Depending on the size of the surgery and the temperament of the animal, protective collars are used, for example, for aggressive or calm post-operative periods.

The most important criterion is the Collar Size. Having these collars available in different sizes ensures that they are suitable for all types of animals. This way, there is a suitable collar for all pets, from small cats to large dogs.

Protective collars come in different models such as stitched, seamless, inflatable, plastic, fabric, etc. They are designed to provide more comfort when they wrap around the animal's neck and prevent injuries. Seamless models, in particular, have a structure supported with cotton fabric in the neck area to provide comfort and may be preferred in some cases.

DEDEKS® Post-Operative collars are used to prevent animals from licking or biting their post-operative stitches or wounds. This is important to prevent wound infections and behaviors that can disrupt the healing process.

It is important to use the Post-Operative Collar as recommended by the veterinarian. The duration of use may vary depending on the type of surgery and the speed of the animal's recovery.

Collars should be comfortable and safe for pets. This allows them to continue their eating and drinking habits.

Regular cleaning and maintenance of the collars are necessary.

Additionally, it is important to check whether the collar causes irritation or allergic reactions on the animal's skin.

If you need to use such a collar as recommended by a veterinarian, the veterinarian will recommend the most suitable model and size for you.

These collars can help your animals go through the healing process comfortably.

- Made from PP material • Suitable for cats and dogs • Should be chosen according to the live weight of the animals • Can be easily attached and removed • Stitched models are reinforced to prevent irritation to the neck and back of the head • It should be checked for irritation and allergic reactions • Make sure the animal can easily fulfill its needs such as eating and drinking.

## DEDEKS® DISPOSABLE RECTAL EXAMINATION GLOVE

The artificial insemination glove or rectal examination glove is the same type of glove used in procedures such as reproductive management or health examinations of large animals.

Disposable Rectal Examination Gloves are used by veterinarians or technical personnel.

DEDEKS® Artificial Insemination Gloves are manufactured to be long and thin because during artificial insemination, sperm is inserted into the female animal's uterus, or during a rectal examination, the animal's rectal area is manually examined.

Single-Use Long Plastic Gloves help maintain a hygienic environment during the procedure and protect the veterinarian's hands while providing a high level of sensitivity to the user during the application.

Some models have elastic at the shoulder part. This elastic ensures that the glove's throat section fits on the arm during the application and does not slip.

In recent years, an extra-soft model has been developed based on user requests, providing slightly more sensitivity compared to other models.

- Made from TPU Plastic
- 87.5 cm in length
- Thickness of 35 microns
- CE certified
- Models with elastic at the shoulder part are available
- Tear-resistant
- Standard models come in boxes of 100 gloves
- Soft models come in boxes of 50 gloves

## DEDEKS® DISPOSABLE NYLON COVERALL (BIRTH GOWN)

The disposable nylon coverall or birth gown is designed to create a hygienic barrier to prevent dirt, dust, and other external factors from coming into contact with the user's clothing or body. However, as a non-sterile product, it does not provide microbial protection.

DEDEKS® Disposable Nylon Coverall or Birth Gown is primarily designed to prevent external factors from contaminating the user's clothing or skin.

The Disposable Nylon Coverall aims to prevent the spread of bacteria, viruses, or other pathogenic microorganisms.

It is long-sleeved and comes in a standard size.

- Made from Polyethylene Plastic
- 130 cm in length
- Thickness of 85 microns, 1 coverall 90 grams
- CE certified
- Worn from the head
- Disposable
- Long-sleeved and standard size
- Not sterile
- Does not provide microbial protection
- Tear-resistant
- Standard models come in boxes of 50 coveralls

Cat. No.	Model	MOQ	Piece / Unit	Barcode	Packaging 48,5*27*32
D-SL020501	Disposable Nylon Coverall Roll of 50 Pieces	6 Pieces	50 Pieces	8683735911715	50/6/300

## DEDEKS® DISPOSABLE BOOT COVERS

Disposable boot covers are footwear or shoe coverings made of waterproof plastic material designed for one-time use.

Disposable boot covers are used in situations where protection from mud, rain, snow, barn environments, or other non-hygienic conditions is desired. They are especially used in the hospital, laboratory, or cleaning sectors to prevent contact with contaminants in dirty and non-hygienic environments. Additionally, they can be used to provide temporary protection in construction, the service industry, or outdoor activities.

Boot covers are disposable and are discarded after use. They are generally cost-effective, making them suitable for one-time needs. Boot covers are worn over boots or shoes and can be disposed of without causing harm to the environment.

**Veterinary boot covers:** Veterinary professionals, such as veterinarians, use boot covers to maintain hygiene and prevent the spread of infections between different patients when working with animals. They use them in their hospitals or clinics, especially during surgical operations or examinations, to keep their footwear and work environment clean.

Therefore, DEDEKS® Disposable Boot Covers can be used as an important tool for hygiene and infection control in the field of animal health.

- Made from Polyethylene Plastic
- Designed for 45 cm high boots
- Base thickness is 140 microns
- Throat thickness is 70 microns • Disposable • Standard size • Available in models with both throat and ankle elastic • Does not provide microbial protection • Tear-resistant
- Standard models come in boxes of 200 boot covers (100 pairs)
- Models with only throat elastic are also available

Cat. No.	Model	MOQ	Piece / Unit	Barcode	Packaging 42*30*55

## DEDEKS® DISPOSABLE NONWOVEN COVERALL

Disposable nonwoven coveralls are a specialized type of clothing used for hygiene purposes in various industries. The term "nonwoven" signifies that these coveralls are made from a non-woven material or fabric. Nonwoven materials are composed of fibers and are typically bonded together under heat and pressure, making them durable and water-resistant.

DEDEKS® Disposable Nonwoven Coveralls can be worn by individuals in various settings to protect themselves from contaminants and contamination. They are commonly used in barns, poultry farms, agricultural facilities, food processing plants, by cleaning workers, or visitors.

Disposable Nonwoven Coveralls can be used by construction workers or in industrial settings such as shipyards and yacht repair shops to protect against potential external pollutants.

In fields and greenhouses, agricultural workers can wear nonwoven coveralls to protect their clothing from coarse contaminants while engaging in agricultural activities.

Since these coveralls are typically designed for single-use, they are disposed of following the recycling and environmental laws of the country after use.

- The fabric area in grams per square meter (g/m<sup>2</sup>) varies depending on the product model.
- Made from nonwoven fabric • Disposable • Hood, wrists, and ankles are elasticized • Front side has a zipper for easy wearing • Permeable to water under high pressure, breathable • Designed to block coarse contaminants • The ultimate decision regarding a specific application lies with the user.
- Flammable material; please keep away from open flames.
- Do not wash, iron, or dry clean.

Cat. No.	Model	MOQ	Piece / Unit	Barcode	Packaging 48,5*27*32
D-SL020125	Disposable nonwoven coverall 25 gr.	100 Pieces	1 Piece	8683735911623	1/100

## DEDEKS® DISPOSABLE LAMINATED COVERALL

Disposable Coveralls are made from nonwoven fabric obtained from the melt of polypropylene plastic. These coveralls have a wide range of applications and become waterproof when laminated. They also become completely waterproof and airtight when isolated with blue stripes.

As a result, they provide a barrier against both micro-level and macro-level coarse contaminants and prevent the transmission of liquids and semi-liquids.

Note that this product is not a medical device.

- The fabric area in grams per square meter (g/m<sup>2</sup>) varies depending on the product model.
- Made from nonwoven fabric
- Disposable
- Hood, wrists, and ankles are elasticized
- Front side has a zipper for easy wearing
- Suitable innerwear should be chosen to reduce heat stress.
- The ultimate decision regarding a specific application lies with the user.
- Flammable material; please keep away from open flames.

## DEDEKS® DISPOSABLE VISITOR APRON

The disposable visitor apron is a garment made from nonwoven fabric, specifically designed for visitors to wear in places where hygiene and infection control are required.

Disposable Visitor Aprons are commonly used in healthcare institutions, laboratories, food processing facilities, manufacturing plants, hotels, restaurants, farms, and similar locations.

They are provided to visitors to reduce the risk of infection and maintain hygiene standards.

In various industries and settings:

- Food Services: Restaurants, cafes, and food production facilities may require customers to wear visitor aprons before entering food production areas to enhance food safety and hygiene.
- Manufacturing Facilities: Manufacturing facilities that require cleanliness and hygiene may ask visitors to wear aprons before entering production areas.
- Laboratories: Laboratories may provide visitor aprons to ensure the protection of visitors from exposure to chemicals or microorganisms.
- Hospitality Sector: Hotels and similar accommodations may request customers to wear aprons before entering rooms.

Visitor aprons are typically disposed of after use, helping to maintain hygiene and cleanliness standards. They have a simple design that is easy for users to put on and take off, providing comfort while protecting the user's body and clothing.

- The fabric area in grams per square meter (g/m<sup>2</sup>) varies depending on the product model.
- Made from nonwoven fabric
- Disposable
- Hood, wrists, and ankles are elasticized
- Front side has a zipper for easy wearing
- Permeable to water under high pressure, breathable
- Designed to block coarse contaminants
- The ultimate decision regarding a specific application lies with the user.
- Flammable material; please keep away from open flames.
- Do not wash, iron, or dry clean.

## DEDEKS® MILKER SLEEVE

In dairy farming, milk yield is one of the most critical factors. High milk yield translates to high profits. During milking, it's important for each animal to feel comfortable and safe, and the milker must work in various conditions, whether it's hot or cold weather or in an environment with constant exposure to water.

The DEDEKS® Milker Sleeve is designed to provide a waterproof garment that prevents the milker's arms from getting wet and ensures a more comfortable working experience. It also helps prevent unpleasant odors and discomfort that may result from contact with milk or feces.

### Features:

- Made from synthetic leather
- Waterproof
- Measures 42 cm in length from wrist to elbow
- Each package contains 1 pair of sleeves
- Elastic cuffs prevent the entry of water or other elements
- Should be ventilated after extended use
- Should not be cleaned with bleach or similar cleaning agents
- Other conventional cleaning agents can be used

## DEDEKS® MILKING AND WASHING APRON

The DEDEKS® Milking Apron is a valuable garment worn by diligent and hardworking milking professionals during the milking process on our prosperous farms.

Constructed from high-quality synthetic leather, this apron is waterproof and designed to prevent water and dirt from wet and dirty environments from reaching your clothing.

The DEDEKS® Milking and Washing Apron is built to withstand the demands of all tasks related to agriculture, home, and garden work, making it an ideal choice for a wide range of activities.

Measuring 121 cm in length and 94 cm in width, this waterproof apron is equipped with two 115 cm straps on both sides, ensuring it fits comfortably for all body types. The durable plastic clip at the neck allows for easy attachment and removal of the apron.

### Features:

- Made from synthetic leather
- Waterproof
- 121 cm in length
- 94 cm in width
- Equipped with two 115 cm straps
- Suitable for all tasks related to agriculture, home, and garden work
- Fits all body types
- Extremely tear and bend-resistant
- Individually packaged in textile packaging
- Should not be exposed to high temperatures
- Please review the washing instructions label and follow the provided guidelines.

DEDEKS® POLYDEKS™ BOOT POLYURETHANE BOOT

The PolyDeks™ Boot is a type of boot made from polyurethane (PU), a waterproof, lightweight, soft, and durable material. Polyurethane is a synthetic material commonly used in shoe and boot manufacturing due to its waterproof, durable, and lightweight properties.

PolyDeks™ Polyurethane boots are popular for outdoor activities, especially those exposed to water, mud, or challenging weather conditions. These boots are often used by veterinarians, farmers, agricultural workers, construction workers, hunters, fishermen, and hikers for both professional and hobby purposes.

- Some advantages of PolyDeks™ Polyurethane boots include:
- 1. Waterproof: Polyurethane boots keep the feet dry thanks to their waterproof properties.
  - 2. Durability: Polyurethane material is highly resistant to impacts and wear, ensuring that the boots last a long time. It is also resistant to substances like manure, oil, petrol, grease, alkalis, and acids. They are slip-resistant.
  - 3. Lightweight: Polyurethane boots can be lighter in weight compared to other materials, preventing fatigue when worn for extended periods.
  - 4. Thermal Insulation: Some polyurethane boot models may include additional thermal insulation features to keep the feet warm in cold weather.
  - 5. Easy Cleaning: Polyurethane boots are generally easy to clean and maintain.

PolyDeks™ Boots are produced in accordance with the 2016/425 EU Directive. O4 and O5 class boots meet the requirements of the Occupational Footwear EN ISO 20347 Standard. S4 and S5 class boots meet the requirements of the Safety Footwear EN ISO 20345 standard. PolyTech Boots are produced in Category II Class and are compliant with Design D. They do not break or crack at temperatures down to -40°C. The production date is located below the shoe size, indicated as month and year. Manufactured with "BASF-The Chemical Company" Polyurethane Raw Material.

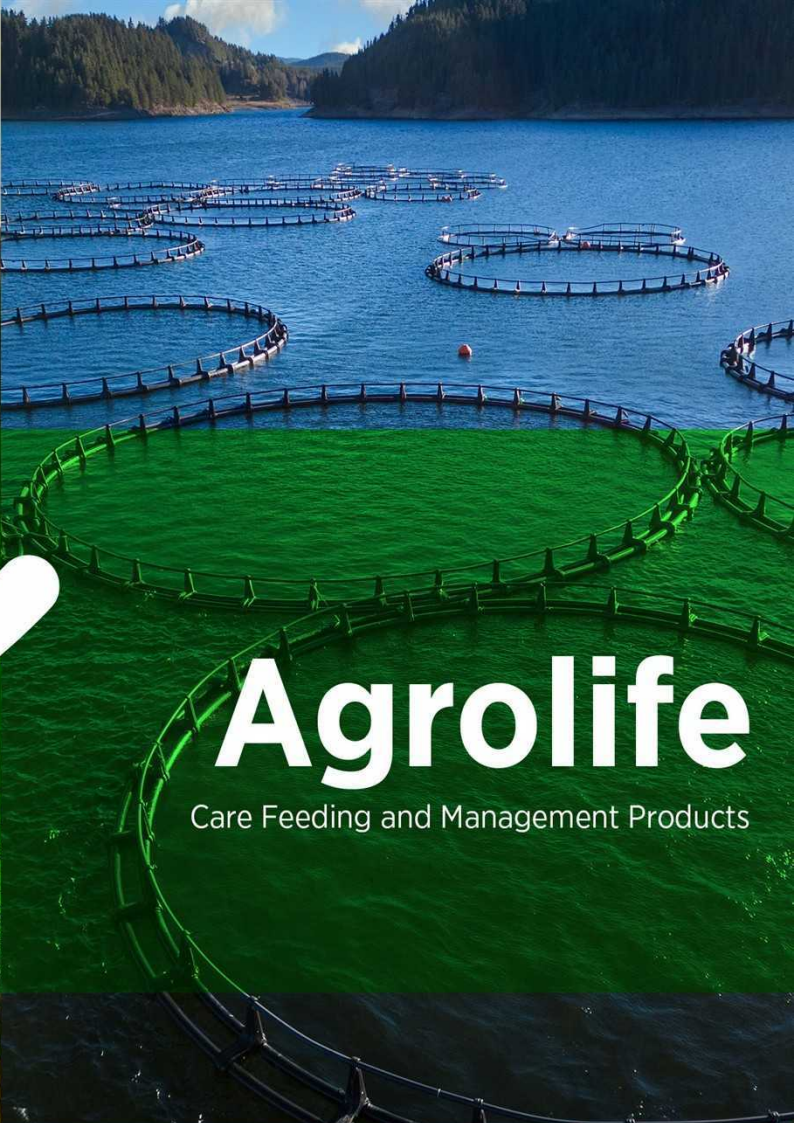

- POLYDEKS™ Polyurethane Boot Features:
- Made from Polyurethane Raw Material
  - 45 cm in height
  - Lightweight
  - High-Quality Polyurethane
  - A, Anti-Static Material
  - FO, Fuel-Oil Resistant Outsole
  - CI, Cold Insulation
  - HI, Heat Insulation
  - P, Steel Midsole Protector
  - Steel Toe Cap Protector
  - SRC, Slip-Resistant (SRA+SRB)
  - Resistant to manure, oil, petrol, grease, alkalis, and acids
  - Comes with a non-slip and non-soiling sole
  - Steel-toed model is resistant to impacts
  - Midsole model is resistant to nail and sharp object penetration
  - Easy to clean
  - Available in various colors such as Khaki, Black, White, Blue, Yellow, and others
  - Available in Steel-toed, Midsole, Steel-toed and Midsole models
  - Available in both high-neck and low-neck models
  - Available in height options of 45-37-31-25 and 19 cm
  - Please inquire about stock availability for products without variation distribution.

Care Feeding and Management Products

DEDEKS® NECK STRAP IDENTIFICATION BELT

The Neck Strap Belt is a carrying belt used for securing and carrying identifier tags on large livestock animals. Identifier tags are essential for managing herds, and they are attached to this belt and placed around the animal's neck.

DEDEKS® Neck Strap Identification Belt is made from durable material, as large livestock animals often endure harsh conditions on farms or pastures. Its durability ensures a long lifespan.

The neck strap provides a comfortable fit for the identifier tags, preventing discomfort for the animals in the neck area. It also offers a secure connection to prevent the tags from falling off or getting lost.

Since different animals can vary in size, the neck strap is adjustable and comes in different lengths to accommodate various animal sizes.

Neck strap identifier tags and belts are crucial tools for the management and monitoring of large livestock animals, contributing to the better management of their health, safety, and productivity.

- Specifications:
- Made using the woven method from polypropylene rope
  - 78 cm in length, including the buckle, for large livestock animals
  - 57 cm in length, including the buckle, for small livestock animals
  - 40 mm in width
  - Equipped with a metal buckle
  - Adjustable to the desired size with holes
  - Unbreakable and durable, designed for long-term use
  - Woven from brown, red, and white ropes
  - Customizable as per your requirements

DEDEKS® NECK NUMBERER

Neck identifiers for both large and small livestock animals are important organizational tools commonly used on farms to facilitate easier access to the animals' identification information. These identifiers are associated with each animal's unique number, allowing for the easier retrieval of their identification details. While the neck identifiers themselves do not provide the animals' identity information, they are linked to ear tags or other identification methods, making it more convenient to access the animals' identification details.

Here are several key areas of use:

1. Identification: Neck identifiers containing a unique number for each large livestock animal make it easier to access their identity information, as they are associated with ear tags or other forms of identification.
2. Recording and Tracking: Farm owners and breeders use these identifiers to track each animal's growth rate, weight, health status, and reproductive history. This information is crucial for managing the health and productivity of the animals.
3. Animal Health and Quarantine: If an animal becomes ill or needs to be quarantined, the DEDEKS® Neck Identifier allows for rapid identification and isolation, preventing the spread of disease to other animals.
4. Feed and Water Monitoring: Monitoring the feed and water consumption of large and small livestock animals becomes more manageable with these identifiers. This ensures that animals grow healthily and meet their nutritional needs.
5. Animal Records: Neck identifiers are used to maintain records of animals on the farm. These records may include birthdates, vaccination histories, pedigrees, and ownership information.
6. Herd Management: Identifiers assist in the effective management of large and small livestock herds. Each animal's number can help understand hierarchy and relationships within the herd.

In conclusion, neck identifiers are a critical tool for both large and small livestock farming. They aid in the monitoring and management of animals and make it easier to access identification information, although the identifiers themselves do not contain the animals' identity information.

- Specifications:
- Made from plastic
  - Each product represents one unit
  - Yellow in color
  - Inscribed with indelible ink
  - Suitable for belts up to 40 mm in width

## DEDEKS® CALF BOTTLE TEAT

The calf bottle Teat is a special type of Teat used with calf bottles to allow calves to consume milk or milk replacement. These Teats facilitate calf feeding and mimic the natural sucking behavior of calves.

Calf bottle Teats are typically made from rubber or silicone material. They have a flexible and durable structure, allowing calves to suckle comfortably.

They come with a standard hole size that provides an average flow rate. It is important to choose the appropriate suction speed based on the calf's age and nutritional needs.

Regular cleaning and sterilization of calf bottle Teats are crucial. Clean Teats are critical for the health of the calves.

Calf bottle Teats are designed to withstand the pressure exerted by calves during sucking and are durable.

Specifications:

- Made from rubber material
- Must be cleaned after each use

Cat. No.	Model	MOQ	Piece / Unit	Barcode	Packaging
A-AL010201	Calf Feeder Bottle Teat Rubber	50 Pieces	1 / Piece	8683735911098	1/50
A-AL010202	Calf Feeder Bottle Teat Rubber with Pacifier	50 Pieces	1 / Piece	8683735911104	1/50

## DEDEKS® CALF FEEDING BOTTLE

The calf bottle is a specialized type of bottle used for feeding calves or other young cattle. These bottles are employed to provide calves with milk or milk replacers.

Calf feeding bottles are typically made from plastic and come equipped with a specialized nipple (teat). The nipple allows the calf to suck and drink the nutrient.

Calf bottles come in different capacities, which can vary depending on the calf's daily nutritional requirements. It's essential to select an appropriate bottle based on your calf's age and size.

Different types of nipples are available for calf bottles, typically categorized as slow-flow and fast-flow nipples. The choice depends on the calf's age and nutritional needs.

Consulting with your Veterinarian regarding calf feeding and care is crucial. Veterinarians can assist in creating a feeding plan tailored to your calf's specific needs.

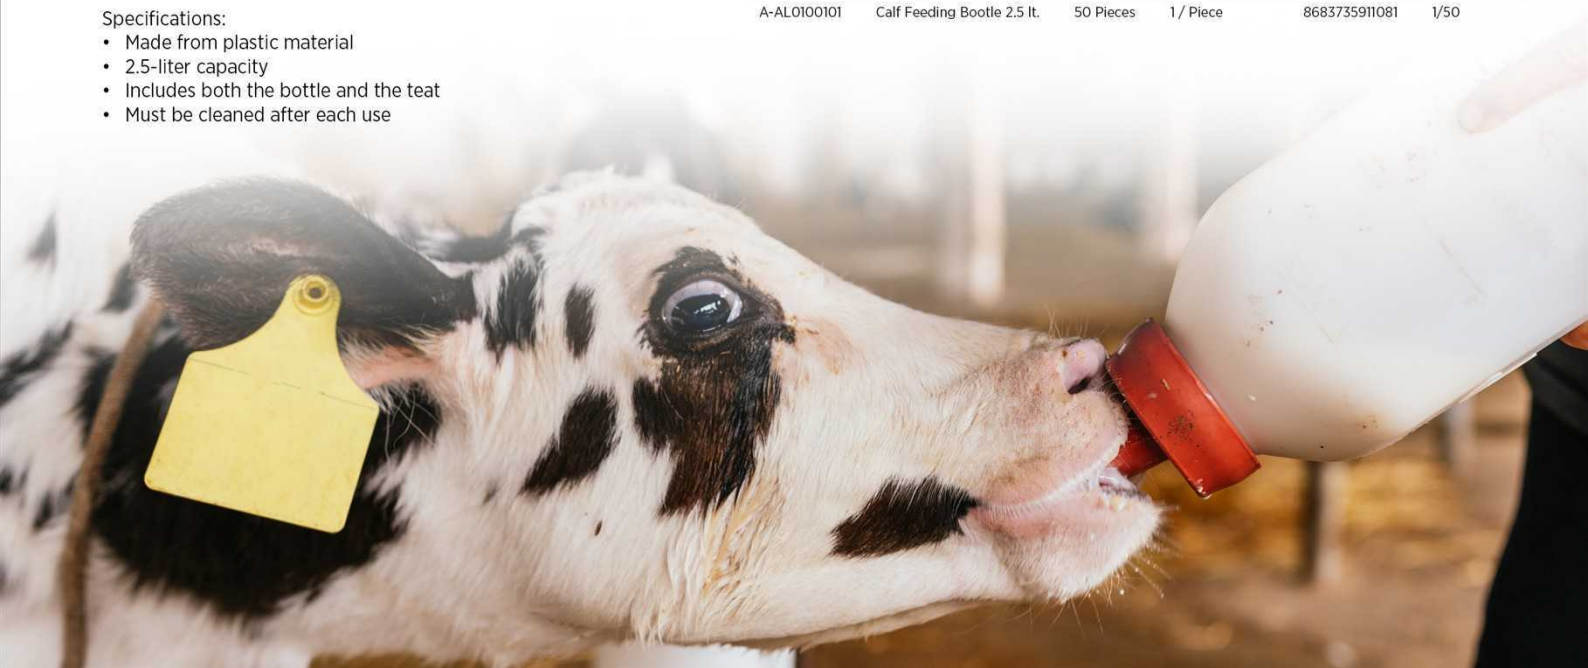

Calf feeding bottles are essential tools for the healthy growth and development of calves. Therefore, it is vital to use these bottles correctly and ensure proper maintenance.

Specifications:

- Made from plastic material
- 2.5-liter capacity
- Includes both the bottle and the teat
- Must be cleaned after each use

Cat. No.	Model	MOQ	Piece / Unit	Barcode	Packaging
A-AL0100101	Calf Feeding Bottle 2.5 lt.	50 Pieces	1 / Piece	8683735911081	1/50

### DEDEKS® LAMB BOTTLE

A lamb bottle is a special type of bottle typically used for feeding newborn lambs and kids (young goats). These bottles are designed to provide lambs with a substitute for mother's milk or milk replacer.

Lamb bottles are generally made from plastic material. They come with a special teat (nipple) that allows lambs to drink the nourishment in a manner similar to suckling.

It's important to seek guidance from a veterinarian for lamb and kid care and nutrition. Your veterinarian can assist in creating a feeding plan tailored to the specific needs of your lambs.

Lamb bottles are a critical tool for ensuring the healthy growth and development of lambs, especially when access to maternal milk or milk formula is limited or when they have been abandoned by their mothers. Therefore, using and maintaining these bottles correctly is essential.

Here are some features of DEDEKS® LAMB BOTTLE:

- Made from plastic material.
- Has a capacity of 500 ml.
- Comes with both a wristband and a teat.
- Should be cleaned after each use.

Cat. No.	Model	MOQ	Piece / Unit	Barcode	Packaging
A-AL010301	Lamb Bottle 500 ml	50 Pieces	1 / Piece	8683735911111	1/50

### DEDEKS® LAMB BOTTLE NIPPLE

The lamb bottle nipple is a specialized type of nipple used with lamb bottles, allowing lambs to consume their nourishment. These nipples are designed to mimic the natural sucking behavior of lambs.

Structure: Lamb bottle nipples are typically made from soft and flexible materials, allowing lambs to suckle comfortably. They are often made from rubber and silicone materials.

Lamb bottle nipples are durable and designed to withstand the pressure applied during sucking by lambs.

Regular cleaning and maintenance of lamb bottle nipples are essential. Clean nipples are crucial for the health of lambs.

Here are some features of DEDEKS® Lamb Bottle Nipple:

- Made of rubber.
- The tip is typically perforated as standard.
- The practical design is compatible with standard beverage bottles.

These nipples play a crucial role in ensuring that lambs receive proper nourishment and care, especially when they cannot nurse from their mothers.

Cat. No.	Model	MOQ	Piece / Unit	Barcode	Packaging
A-AL010402	Lamb Bottle Nipple Standard Nipple	50 Pieces	1 / Piece	8683735911128	1/50
A-AL010401	Lamb Bottle Nipple Practica	50 Pieces	1 / Piece	8683735911135	1/50

## DEDEKS® LAMB MILK FEEDING BUCKET

The lamb milk feeding bucket is a specialized tool designed for lambs to suckle milk. Lambs initially feed by suckling their mothers after birth, but in some cases, lamb milk feeding buckets can be useful, especially when the mother's milk production is insufficient or when lambs are separated from their mothers.

Additionally, DEDEKS® Lamb Milk Feeding Buckets are preferred in industrial sheep farming or situations where milk needs to be evaluated separately.

DEDEKS® Lamb Milk Feeding Bucket is made from food-grade plastic material. It is used to hold either the mother sheep's milk or specially prepared lamb formula. Lambs suckle the milk through a special teat or nipple attached to the bucket, promoting healthy growth and development.

Lamb milk feeding buckets support the growth of lambs by ensuring they receive the correct amount of nutrition. This is particularly important when lambs are separated from their mothers or when the mother's milk production is inadequate. Veterinarians or livestock experts recommend the use of such tools to ensure proper nutrition for lambs.

Lamb milk feeding buckets are used on farms and livestock operations. To ensure the healthy growth and development of lambs, these tools should be used and cleaned properly.

Especially in the case of the 5-nipple Lamb Milk Feeding Bucket, the nipples of the 3-nipple Lamb Milk Feeding Bucket should be cleaned of milk residues.

Since milk is a nutritious substance, the buildup of bacterial load can lead to digestive problems in lambs.

### Features:

- Made from food-grade plastic material
- Has an 8-liter capacity
- Features measurement markings inside
- Equipped with a valve system to prevent milk or formula from flowing freely (except for the 6-nipple model)
- Sold as a set, including:
  - 1 Bucket
  - 1 Bucket Hanging Plate
  - 1 Metal Carrying Handle
  - 5 Nipples (varies depending on bucket type)
  - 5 Valves (varies depending on bucket type)
  - 5 Valve Seals (varies depending on bucket type)
- Easy to clean
- Should be cleaned regularly to prevent the buildup of bacterial density.

## DEDEKS® CALF FEEDING BUCKET

The Calf Feeding Bucket is a specialized container or device used for calves to consume milk. When calves are born, they are typically nursed by their mothers. However, there may be situations where the mother's milk production is insufficient, or calves need additional feeding for various reasons. In such cases, the calf feeding bucket is used.

Furthermore, with the development of industrial livestock, each calf is individually fed, as having every calf suckling its mother would lead to significant chaos or difficulties in managing and transporting a large number of calves. Thus, calf feeding buckets are preferred.

The calf feeding bucket is typically made of plastic and is manufactured in a standard 8-liter size. It is filled with milk or a specialized calf milk replacer. Calves then suck the milk through a special teat or nipple at the end of the bucket, similar to a bottle. This allows calves to grow and develop healthily.

Calf feeding buckets are designed to mimic the act of suckling and facilitate the intake of milk by calves. As calves grow and transition to solid foods, they need to be weaned off milk.

Calf feeding buckets are used on farms and livestock operations to facilitate calf feeding. They are essential for the healthy growth of calves and should be used in accordance with feeding guidelines recommended by veterinarians.

### Specifications:

- Made from food-grade plastic material
- 8-liter capacity
- Includes a measurement scale on the inside
- Sold as a set, including:
  - 1 Calf Bucket
  - 1 Bucket Hanger Plate
  - 1 Metal Carrying Handle
  - 1 Teat (varies depending on the bucket type)
  - 1 Valve (varies depending on the bucket type)
  - 1 Valve Seal (varies depending on the bucket type)
- Easy to clean
- Should be cleaned frequently to prevent bacterial buildup

## DEDEKS® CALF HUT AND PLASTIC FENCE KIT (CALF HOUSE)

Calves are the future of livestock operations and herd health. Raising healthy and strong cattle on farms is achieved through proper conditions for calf and young cattle rearing. Providing suitable shelter and environmental conditions for calves is crucial to support their growth and development. Here's a solution that meets these needs: the Calf Hut and Plastic Fence Kit by DEDEKS®.

DEDEKS® Calf Hut and Plastic Fence Kit is designed with the comfort and health of young cattle in mind.

Some advantages this system can offer include:

**Hut and Fences:** The plastic hut and fence included in this kit provide a safe shelter for young calves. The hut's ventilation ensures that the animals stay comfortable.

**Shade Protection:** The shades inside the calf hut protect the feeding area from sunlight, wind, rain, and humidity, preventing feed from getting wet or spoiled.

**Feeding Trough and Bottle:** The feeding trough and bottles included in the kit allow calves to store their required water and feed sources in optimal conditions. This makes feeding more regular and convenient.

**Quality Materials:** The calf hut and fences are made from durable and UV-resistant HDPE UV 8 Polyethylene material, ensuring a long-lasting and sturdy solution.

**Health and Nutrition:** The calf hut allows for individual feeding of each calf, making it easier to monitor their growth. It also provides protection against contagious diseases.

**Optional Metal Fence Kit:** Optionally, there is a metal fence kit available. This cathodic dip-painted metal fence kit offers increased durability and protection.

The Calf Hut and Plastic Fence Kit prioritize the comfort and health of young cattle while addressing the needs of farms. Consider this excellent solution for raising healthy and robust cattle.

**Calf House:**

- Designed for calves
- Dimensions: 170 cm x 120 cm x 130 cm
- Made from HDPE UV 8 Polyethylene material
- Equipped with ventilation in the interior
- Easy to clean
- Requires regular cleaning

**Plastic Fence Kit:**

- Dimensions: 95 cm x 130 cm x 130 cm
- Includes 1 calf hut, 2 shades, 1 bottle, and 3 feeding troughs
- Ventilation in the huts
- Features a practical assembly system
- Shipped disassembled

**Optional Calf Hut Metal Fence Kit:**

- Coated with cathodic dip paint
- Dimensions: 90 cm x 120 cm x 120 cm
- Includes 1 calf hut, 1 metal fence, 1 shade, 2 feeding troughs, and 1 bottle
- Features a practical assembly system
- Shipped disassembled

## DEDEKS® MULTI-CALF HUTCH

Young generations are the future, and the healthy growth and development of calves in farms are essential for the foundation of a healthy cattle herd. Providing an excellent solution for calves, Multi-Calf Huts offer durable and portable structures where calves can comfortably stay after weaning (typically around 3 months old) until they are 6-9 months old.

Durable and Portable Design Calf igloos are constructed from sturdy materials and have a long lifespan. They are also portable within the barn, allowing them to be used in various locations as needed. This feature provides farmers with great flexibility and the ability to easily relocate shelters according to their animals' requirements.

Various Capacities of Multi-Calf Hut Igloo shelters offer suitable options for different-sized groups. Small igloos are designed to accommodate 7-9 calves aged between 7-9 months, while large igloos are designed for 13-15 calves aged between 6-7 months. They provide enough space and comfort for the calves and encourage them to gather, play, and rest comfortably.

Easy Installation Igloos typically consist of two parts and are easy to assemble. This allows farmers to quickly set up shelters for their calves. They can be used both inside the barn and in open areas, providing appropriate shelter for different weather conditions.

DEDEKS® Multi-Calf Huts are excellent shelters that ensure the comfortable and safe growth of calves after weaning. Their durable design and portability are significant aids for farmers in protecting and caring for their animals effectively.

### Large Multi-Calf Hut:

- Specially designed for calves
- Made from LLDPE UV 8 Polyethylene material
- The hut consists of 3 parts
- Dimensions: 550 cm x 300 cm x 170 cm for the hut, 450 cm x 300 cm x 100 cm for the metal fence
- Plastic feeding trough and waterer are included
- Long-lasting
- Requires regular cleaning

### Small Multi-Calf Hut:

- Specially designed for calves
- Made from LLDPE UV 8 Polyethylene material
- The hut consists of 3 parts
- Dimensions: 400 cm x 300 cm x 170 cm for the hut, 250 cm x 300 cm x 100 cm for the metal fence
- Plastic feeding trough and waterer are included
- Long-lasting
- Requires regular cleaning

**Optional Metal Fence Kit:** Optionally, there is a metal fence kit available. This cathodic dip-painted metal fence kit offers increased durability and protection.

The Calf Hut and Plastic Fence Kit prioritize the comfort and health of young cattle while addressing the needs of farms. Consider this excellent solution for raising healthy and robust cattle.

### Calf Hut:

- Designed for calves
- Dimensions: 120 cm x 200 cm x 110 cm
- Made from HDPE UV 8 Polyethylene material
- Easy to clean
- Requires regular cleaning

## DEDEKS® CALF HUT UNDER SHELTER

Calves are the future of livestock operations and herd health. Raising healthy and strong cattle on farms is achieved through proper conditions for calf and young cattle rearing. Providing suitable shelter and environmental conditions for calves is crucial to support their growth and development. Here's a solution that meets these needs: the Calf Hut and Plastic Fence Kit by DEDEKS®.

DEDEKS® Calf Hut and Plastic Fence Kit is designed with the comfort and health of young cattle in mind.

Some advantages this system can offer include:

**Hut and Fences:** The plastic hut and fence included in this kit provide a safe shelter for young calves. The hut's ventilation ensures that the animals stay comfortable.

**Shade Protection:** The shades inside the calf hut protect the feeding area from sunlight, wind, rain, and humidity, preventing feed from getting wet or spoiled.

**Feeding Trough and Bottle:** The feeding trough and bottles included in the kit allow calves to store their required water and feed sources in optimal conditions. This makes feeding more regular and convenient.

**Quality Materials:** The calf hut and fences are made from durable and UV-resistant HDPE UV 8 Polyethylene material, ensuring a long-lasting and sturdy solution.

**Health and Nutrition:** The calf hut allows for individual feeding of each calf, making it easier to monitor their growth. It also provides protection against contagious diseases.

## DEDEKS® FROST-FREE WATER TROUGH

Frost-free water troughs are equipment used to meet the water needs of both large and small livestock. These troughs allow animals to drink water without restrictions (ad libitum) and prevent the water from freezing. Especially in cold climates or during the winter months, providing water to animals can be challenging due to freezing. Frost-free water troughs are designed to solve this problem.

DEDEKS® Frost-Free Water Trough features an insulated design, and it is equipped with polyurethane insulation to prevent the water from freezing. This ensures that animals always have access to fresh and liquid water, which is crucial for their health and productivity.

During the summer months, when the top covers are removed and the float is taken out, these troughs can also be used for small livestock.

These types of troughs are used in farms, barns, or other animal breeding facilities and play an essential role in continuously meeting the water needs of animals. Additionally, by allowing animals to drink water freely rather than restricting them, they can contribute to animal welfare.

- Made from LLDPV UV8 Polyethylene material.
- Double-compartment model measures 100 cm x 60 cm x 45 cm.
- Single-compartment model measures 61 cm x 58 cm x 45 cm.
- Frost-free up to -35 degrees Celsius due to the insulation.
- Double-compartment models have the capacity to meet the needs of 25 large livestock animals.
- Single-compartment models have the capacity to meet the needs of 13 animals.
- Equipped with a float valve.
- The trough is always filled with water.
- It should be cleaned at short intervals

## DEDEKS® DISINFECTION POOL (FOOTBATH)

A disinfection pool is a foot disinfection unit used to ensure hygienic conditions when entering and exiting milking parlors and barns. The footbath is designed for cleaning and disinfecting the hooves of animals, as well as for applying necessary treatments for hoof care.

The dimensions of the unit are such that all four hooves of the animals can comfortably fit in it. This ensures thorough cleaning and disinfection of the hooves.

At the base of the disinfection pool, there is a drainage tap. This tap is used for regularly changing and cleaning the water and disinfectant used in the footbath. It also facilitates the easy disposal of accumulated dirt and waste materials.

Hygiene: Foot disinfection units like these are used on farms to prevent the spread of diseases among animals and to maintain their health.

Foot disinfection units play a significant role in preventing the spread of infectious diseases on farms by ensuring the cleaning and disinfection of hooves. They are widely used in the livestock industry and contribute significantly to maintaining hygienic conditions.

- Made from LLDPE UV8 Polyethylene material
- Large model dimensions: 90 cm x 200 cm x 15 cm
- Capacity: 240 liters of water
- Small model dimensions: 75 cm x 55 cm x 13 cm
- Used for the entry and exit of people into enclosed areas
- Equipped with a drainage tap at the base.

A-AL0305	Disinfection Pool (Footbath/For Humans)	15 Pieces	1 / Piece	8683735911418	1/15

## DEDEKS® SUCK STOP

Calf suckling restrictors, also known as nose flaps, are typically designed as equipment that prevents calves from reaching their mothers' udder areas with their heads and mouths.

When calves have these suckling restrictors in place, they cannot attempt to suckle their mothers' milk, but they can still drink water and eat freely.

Calf suckling restrictors can be used for the following purposes:

1. Protecting Milk Production: Calves may reduce milk production when they frequently suckle their mothers' udders. Calf suckling restrictors can help dairy cows produce more milk.
2. Facilitating Milking: They help provide cows with a spatial arrangement to be milked more quickly and comfortably. This can assist dairy farmers in milking more efficiently.
3. Calf Health: Calves that stand together freely tend to harm each other by sucking on each other's ears, tails, and navels. This can occasionally lead to infections. Calf suckling restrictors can prevent or reduce this behavior.
4. Controlling Feeding: By limiting calves' right to suckle milk, they can help calves develop more effective chewing and digestive capabilities. They can also encourage calves to consume more supplemental feed.

Calf suckling restrictors should be used carefully because they have an impact on calf growth and health. Additionally, it must be ensured that these devices are correctly attached and do not harm animal welfare. Calf suckling restrictors are commonly used in dairy farming or milk production facilities, but their use should comply with local regulations and animal welfare standards.

- Made from plastic.

## DEDEKS® CALVING ROPE

The calving rope, provided by DEDEKS®, is a veterinary tool designed to assist in the birthing process of animals on farms, particularly cattle, but it can also be used for sheep, horses, and pigs. Its primary function is to aid in maintaining the correct positioning of the calf's head and legs during birth. Calving in cows can sometimes present difficulties that may jeopardize the health of both the cow and the calf.

DEDEKS® calving rope is employed in such situations to make the calving process more manageable and safer.

How to use DEDEKS® calving rope:

1. Ensure that the rope is readily available as soon as you observe the cow entering labor or once the birthing process has initiated.
2. If you notice signs of labor in the cow, seek assistance promptly from a veterinarian or an experienced technician.
3. Place the cow in a secure enclosure or designated birthing area.
4. Position the DEDEKS® calving rope around the cow's legs and under its head when the calving process is underway.
5. The calving rope will help maintain the correct positioning of the cow's head and legs, facilitating a smoother birth.
6. After the birth is complete, carefully remove the rope and promptly attend to the newborn calf.

It's important to note that calving in cows is typically best conducted under the supervision of a veterinarian. When using the DEDEKS® calving rope, exercise caution, and take all necessary precautions to ensure the well-being of both the cow and the calf.

Features of DEDEKS® Calving Rope:

- Made from polyester.
- Does not absorb blood and remains clean.
- Does not harden.
- Length: 120 cm.
- Should be disinfected regularly and after each use.
- Can be used for many years.

Cat. No.	Model	MOQ	Piece / Unit	Barcode	Packaging
V-VL090104	Calving Rope 120 cm	100 Pieces	1 / Piece	8683735911692	1/100

DEDEKS® UMBILICAL CORD CLAMP

DEDEKS® Umbilical Cord Clamp is a double-sided plastic clamp. During fetal life, the baby relies on the vena umbilicalis, a cluster of blood vessels, within the placenta. During childbirth, the umbilical cord is either torn or cut by a midwife in a proportional manner. Once the umbilical cord is severed, the baby begins to rely on its own circulation. While the baby is in the mother's womb, it is in a natural and sterile environment, but during childbirth, it transitions to a delivery room environment before returning to its natural surroundings.

During this transition, DEDEKS® Umbilical Cord Clamp is used to prevent potential bleeding from the umbilical cord and minimize the presence of coarse debris and invisible bacterial contamination. It is applied by disinfecting the area approximately 0.5 cm to 1 cm from the body-close part of the vena umbilicalis and locking the umbilical clamp.

Here are some features of DEDEKS® Umbilical Cord Clamp:

- It is made of plastic.
- It is bladeless.
- It does not contain latex.
- It has teeth to grip the umbilical cord securely.
- Rounded edges prevent irritation to the skin.
- It is easy to lock.
- Once locked, the umbilical clamp cannot be reopened or reused.
- It can be either sterile or non-sterile.
- Sterile versions are sterilized with ethylene oxide.

Cat. No.	Model	MOQ	Piece / Unit	Barcode	Packaging 28*48,5*32
D-HLO30102	Umbilical Cord Clamp Non-Steril	2500 Pieces	25 / Pieces	8683735910800	25/100

DEDEKS® HORN SOLDERING IRON

In large livestock herds, establishing animal hierarchy and preventing injuries during feeding and care are of great importance. While some cattle breeds and individual animals may not have horns genetically, generally, cattle breeds are horned.

Within the herd, there can be instances of animals with long horns and others without horns or with broken horns, leading to injuries and trauma among them. Occasionally, an animal with horns might gain an advantage in feeding by preventing others from accessing food.

In herd management, this situation is rectified, and calves are typically controlled when they are only 1 to 2 months old.

Calf dehorning helps accomplish this process more effectively and safely. However, the use of this tool requires experience and caution because improper usage can harm the animal. Additionally, this procedure should be carried out in compliance with local laws and regulations on animal welfare.

Calf dehorning is often performed by veterinarians or experienced farmers in most places. It's essential to ensure the comfort and safety of the animal during this process. Therefore, seeking professional assistance for calf dehorning may be the best approach.

For more detailed information, you can refer to the user manual.

Specifications of DEDEKS® Horn Soldering iron:

- Made from stainless steel, copper, and ABS plastic handles
- Input Voltage Safety Transformer Output Voltage Safety Transformer Power: 220V / 160W
- Max temperature in the burning ring and Heating time: 620 °C / 1-5 min
- Diameter of the burning tip: 18 mm
- Cable length: 3 meters
- User manual is included in the box

Cat. No.	Model	MOQ	Piece / Unit	Barcode	Packaging 39*33*28
A-AL0503	Horn Soldering Iron	20 Pieces	1 / Piece	8683735910824	1/20

## DEDEKS® ELASTRATOR PLIERS

Elastrator pliers are a tool used for placing an elastrator band, also known as an elastration band, around the neck or tail of an animal.

- Used for applying elastrator bands.
- Can be made of plastic or metal.
- Usage should be determined by healthcare professionals.
- High compliance with regional animal welfare regulations is essential.
- Not used on areas around the horns or tail.

Cat. No.	Model	MOQ	Piece / Unit	Barcode	Packaging
A-AL050101	Elastrator Pliers Metal	75 Pieces	1 / Piece	8683735910510	48,5*27*32 1/75

## DEDEKS® ANIMAL IDENTIFICATION BAND

Herd management involves the classification of animals based on various criteria for their care and feeding. For example, factors such as high milk yield, high meat yield, daily live weight gain, illness, vaccination, breeding, heavy pregnancy, and the fresh period play a role in this classification.

DEDEKS® Animal Identification Band is a suitable product for distinguishing and grouping these animals. It is attached to the animals' wrists to differentiate them from each other.

Within a large herd, animals grouped with the same color band can be easily identified.

Here are some features of DEDEKS® Animal Identification Band:

- Lightweight.
- Made from PVC textile fabric.
- It measures 3 cm in width and 36 cm in length.
- It has rounded edges to prevent harm to the skin.
- Available in Red, Yellow, and Blue color options.

Cat. No.	Model	MOQ	Piece / Unit	Barcode	Packaging
A-AL040101	Yellow	100 Pieces	10 / Pieces	8683735910848	48,5*27*32 1/10/100
A-AL040102	Red	100 Pieces	10 / Pieces	8683735910855	1/10/100
A-AL040103	Blue	100 Pieces	10 / Pieces	8683735910862	1/10/100

## DEDEKS® HORN ELASTIC RUBBER RINGS

In herd management, an important aspect is the hierarchy within the herd. In small livestock herds, the issue of horns becomes significant. Animals with broken horns or those with sharp horns that can harm other animals in the herd can not only cause financial losses but also dominate during feeding, potentially consuming the food of other animals in the herd. In such cases, horn elastic bands, such as DEDEKS® HORN ELASTIC RUBBER RINGS, are used to temporarily reduce the size of the horns and prevent these issues.

Here are some features of DEDEKS® HORN ELASTIC BAND:

- Made of rubber.
- Applied using an elastor pen.
- Its usage should be determined by healthcare professionals.
- Strict adherence to regional animal rights regulations is necessary.
- It should not be used except for the horn and tail regions.

These types of bands play a crucial role in ensuring the safety of animals and maintaining order within the herd. However, they should be used with care, and the well-being of the animals should always be a priority.

Cat. No.	Model	MOQ	Piece / Unit	Barcode	Packaging
A-AL050101	Horn Elastic Rubber Rings Orange 100-pack	100 Pieces	100 / Pieces	8683735910503	48,5*27*32 1/100/100
A-AL050102	Horn Elastic Rubber Rings Orange 500-pack	10 Pieces	500 / Pieces	8683735910879	1/500/5000

DEDEKS® ANIMAL IDENTIFICATION PLASTIC BELT

Herd management involves the classification of animals based on various criteria for their care and feeding. For example, factors such as high milk yield, high meat yield, daily live weight gain, illness, vaccination, breeding, heavy pregnancy, and the fresh period play a role in this classification.

DEDEKS® Animal Identification Plastic Belt is a suitable product for distinguishing and grouping these animals. It is attached to the animals' wrists to differentiate them from each other.

Within a large herd, animals grouped with the same color belt can be easily identified.

Here are some features of DEDEKS® Animal Identification Plastic Belt:

- Lightweight.
- Made from PVC material.
- It measures 3 cm in width and 37 cm in length.
- It has rounded edges to prevent harm to the skin.
- Available in Red, Green, Yellow, and Blue color options.

Cat. No.	Model	MOQ	Piece / Unit	Barcode	Packaging 48,5*27*32

A-AL040704	Yellow	100 Pieces	10 / Pieces	8683735910589	1/10/100

DEDEKS® TEAT DIPPING CUP

The large livestock Teat Dipping Cup is an equipment piece used during the milking process of cattle, dairy cows, or other large livestock. Milking is done to obtain milk from large livestock for the production of dairy products. The udder immersion cup is designed to facilitate the necessary udder cleaning and disinfection process during milking.

The primary functions of the large livestock udder immersion cup can include:

1. Udder Cleaning: The cup contains a disinfectant solution that cleans the teats of cattle or other large livestock, ensuring hygiene.
2. Udder Disinfection: The immersion cup allows contact with a disinfectant solution to sterilize the teats, eliminating microorganisms.
3. Milking Process Facilitation: Using this cup makes the milking process more efficient and hygienic, resulting in cleaner milk products for dairy producers.

The pre-dipping and post-dipping processes are different both in terms of the procedure and the disinfectant used. Pre-dipping and post-dipping cups are essential components of a milking parlor or milking equipment set, aiding in the successful completion of the milking process. Such equipment is commonly used in the dairy industry and on large livestock farms.

Features:

- 100 ml capacity
- Mouthpiece designed to prevent spillage
- Equipped with a hook for convenient hanging
- Transparent in color
- Made from soft plastic material
- Recyclable models have an anti-overflow system
- Foam-generating models produce consistent foam
- Long-lasting and easy to clean

Cat. No.	Model	MOQ	Pieces / Unit	Barcode	Packaging 39*33*28

A-AL0303	Pre-Milking Foam-Generating Teat Dipping Cup	20 Pieces	1 / Piece	8683735911395	1/20

## DEDEKS® RUMEN MAGNET

Ruminants, especially cattle, have a complex digestive system for digesting grasses and other plants. However, this system can sometimes allow foreign objects to enter the digestive tract.

A rumen magnet is an essential prophylactic (preventive) tool used for the health of cattle and other ruminants. This magnet is either placed inside a plastic casing or manufactured in a row on a steel rod. The purpose of this magnet is to attract foreign objects that reach the ruminant's stomach and safely hold them inside the stomach.

The feeding habits of ruminants offer many opportunities for foreign objects to enter their digestive systems. These objects often have ferrous (magnetic) properties and can include things like nails, wires, balls, or other metal pieces. The rumen magnet attracts and retains these foreign objects in the stomach without causing harm. This prevents serious issues that could otherwise damage internal organs.

A veterinary magnet or rumen magnet is applied to the animal by veterinarians or experienced farmers. Typically, this process occurs through the animal's swallowing reflex, and the magnet is placed in the animal's stomach. This procedure is generally painless and is considered one of the simplest and most effective preventative measures, typically applied to animals older than 6 months, to safeguard their health.

Using the DEDEKS® Rumen Magnet is important for preserving the health of animals and preventing internal organ damage caused by foreign objects. This simple precaution can help animals lead healthier and longer lives. Consider consulting your veterinarian to have this measure applied to your animals.

### Features:

- Specifically developed for animals
- Made from stainless steel
- Single-use
- Should be administered by experienced individuals
- Plastic casing model is available

Cat. No.	Model	MOQ	Piece / Unit	Barcode	Packaging
A-AL060301	Rumen Magnet Metal Head without Cage	25 Pieces	1 / Piece	8683735910688	1/25/300
A-AL060302	Plastic Caged Rumen Magnet	25 Pieces	1 / Piece	8683735911722	1/25/300

## DEDEKS® ANTI-KICK BAR (KICK SAVER)

The kick preventer is used to restrain the animal during procedures such as examination, milking, and care of large livestock. It is attached to the rear leg abdomen of the animal, preventing it from kicking, starting from the hip protrusion. It can be adjusted according to the weight and size of the animal with its adjustment holes. Care should be taken when using it on pregnant animals.

- Made of galvanized pipe
- Suitable for large livestock
- Easily adjustable to the animal with adjustment holes

Cat. No.	Model	MOQ	Piece / Unit	Barcode	Packaging
A-AL0601	Anti-Kick Bar (For Livestock)	15 Pieces	1 / Piece	8683735911548	1/15

DEDEKS® ANIMAL PROD DEVICE

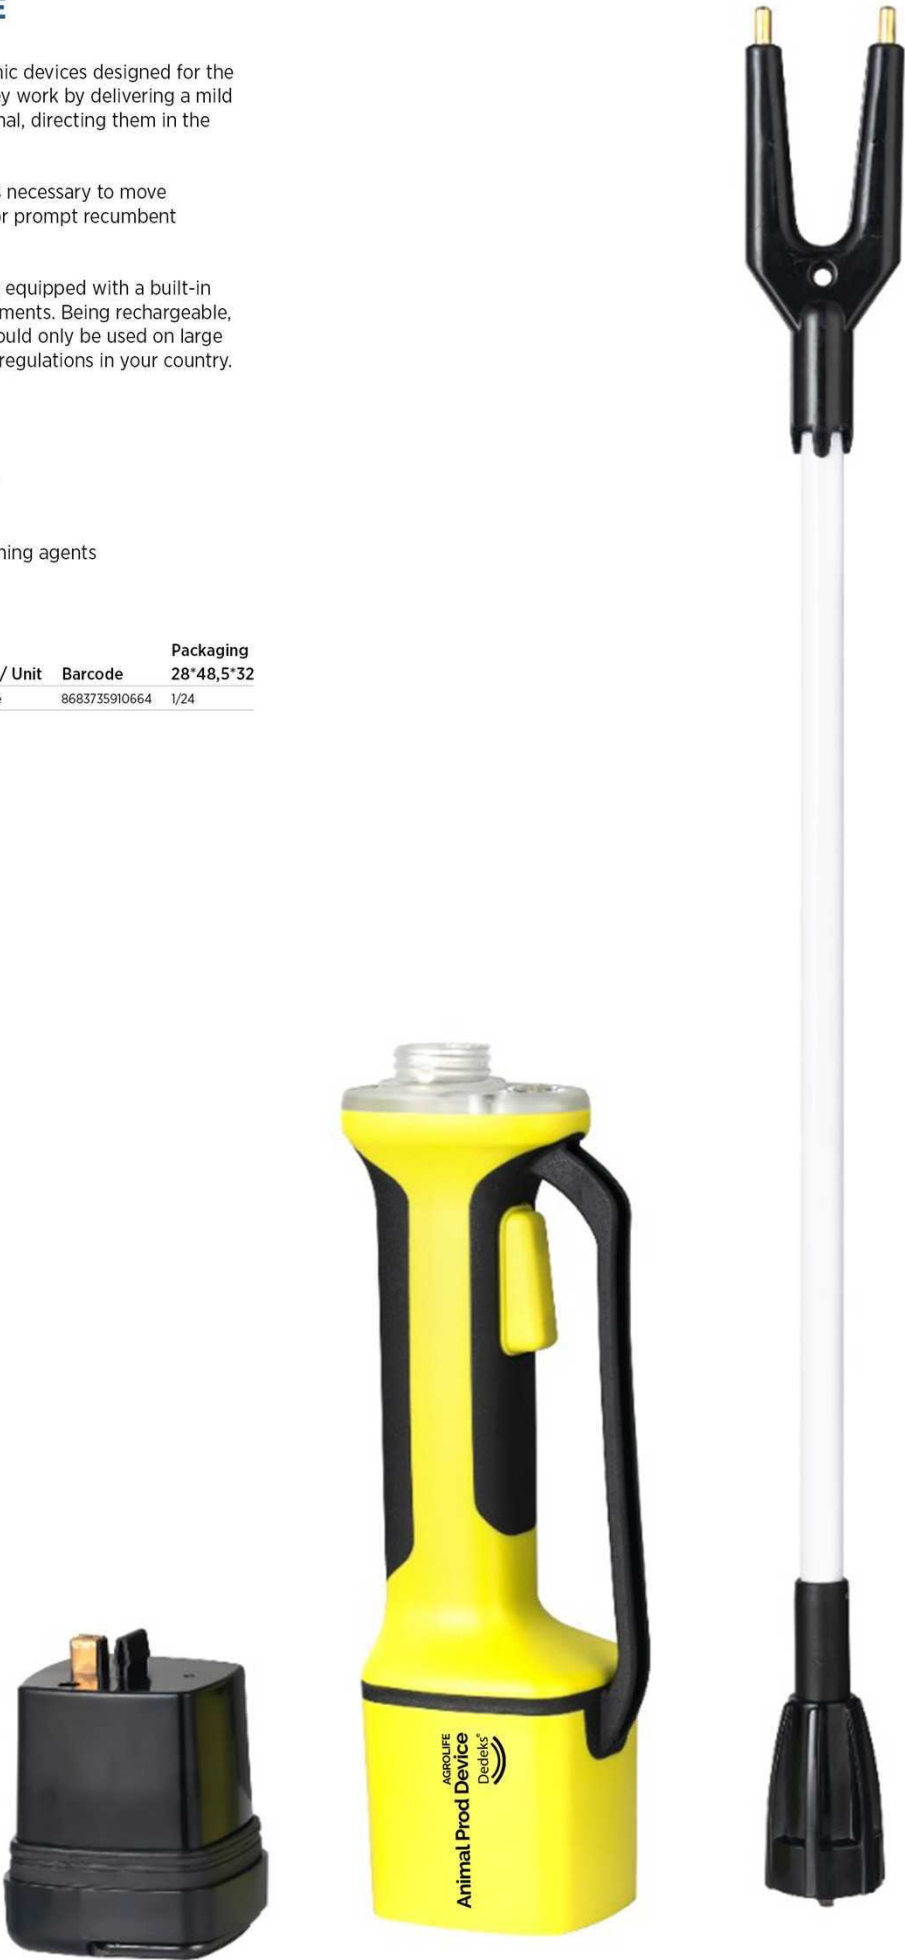

Cattle prods, also known as stock prods, are electronic devices designed for the training and guidance of large livestock animals. They work by delivering a mild electric shock to the body of the large livestock animal, directing them in the desired direction or behavior.

Cattle shock devices are used in situations where it's necessary to move animals in herds, guide them along a specific path, or prompt recumbent animals to stand up.

The DEDEKS® Rechargeable Flashlight Cattle Prod is equipped with a built-in flashlight, providing a source of light in dark environments. Being rechargeable, it can be used for many years. Please note that it should only be used on large livestock animals in accordance with animal welfare regulations in your country.

- Features:
- Has a flexible 71 cm shaft
  - Comes with a charging device
  - Equipped with a rechargeable 5400 mAh battery
  - Designed for use only on large livestock animals
  - User manual included in the package
  - Should not be cleaned with bleach or similar cleaning agents
  - Other conventional cleaning agents can be used
  - Comes with a 1-year warranty

## DEDEKS® Calf Blanket 80 cm

The calf blanket is an essential livestock care product, especially designed to support the healthy growth of newborn calves by regulating their body temperature. These blankets prevent heat loss by protecting calves from cold, as they are particularly sensitive to external temperatures during the first weeks after birth. As a result, calves become more resistant to diseases and develop faster. The blankets also help reduce stress levels, allowing calves to grow in a calmer and more comfortable environment. They are commonly used, especially in cold climates and during seasonal transitions, to improve calf survival rates.

**Material:** Made from waterproof and breathable fabrics.

**Features:** May include adjustable straps and easy cleaning features.

**Benefits:**

- Regulates body temperature
- Reduces stress levels by minimizing the effects of hypothermia
- Lowers the risk of disease
- Aids in faster growth

**Usage Duration:** Typically used for 3-4 weeks but can be used longer depending on the calf's condition.

**Washing Instructions:** Should be washed in cold water at 30°C. Washing at high temperatures may damage its waterproof properties.

## DEDEKS® EAR NOTCHER 6 inch

The sheep ear notcher is a tool used by farmers to easily identify their sheep. With this tool, each sheep is marked with a unique notch pattern, preventing confusion and facilitating the tracking of animals.

### Functions of the Sheep Ear Notcher

**Identification:** Each flock of sheep is marked with a different notch pattern to identify them as a group.

**Record Keeping:** Information such as the birth date, breed, and health status of notched sheep is recorded, allowing the tracking of the animals' life cycle.

**Flock Management:** Managing and controlling animals in large flocks becomes easier.

### Working Principle of the Sheep Ear Notcher

Sheep ear notchers are made of stainless steel and come in various sizes and shapes of jaws. These jaws take a small piece from the sheep's ear, creating a specific notch. The position and shape of the notches are done according to a pre-determined code.

### Advantages of the Sheep Ear Notcher

**Affordable and Practical:** It is more economical compared to other identification methods.

**Permanent:** Once applied, the notch is permanent for life.

**Fast:** Even large flocks can be marked in a short time.

**Minimal Harm to the Animal:** When used correctly, it causes little harm to the animal.

### Usage of the Sheep Ear Notcher

- Made from stainless steel.
- The notching tool is cleaned and disinfected before use.
- The sheep is securely held, and its ear is positioned appropriately for the notcher.
- The notching tool is applied quickly and firmly to create the notch.
- The tool is disinfected both before and after the procedure.
- The procedure must be carried out in accordance with the recommendations of animal health professionals and the Animal Welfare Law.

## DEDEKS® LONG BOLUS APPLICATOR 53 CM

The Long Bolus Applicator is a tool used to safely administer bolus magnets or therapeutic boluses to large livestock, preventing hardware disease or supporting treatment.

- Made from stainless steel and plastic
- Ergonomically designed with a smooth structure to prevent harm to the animal's throat
- Easy to use and harmless to animal health
- Easily cleanable and sterilizable

### Usage Instructions:

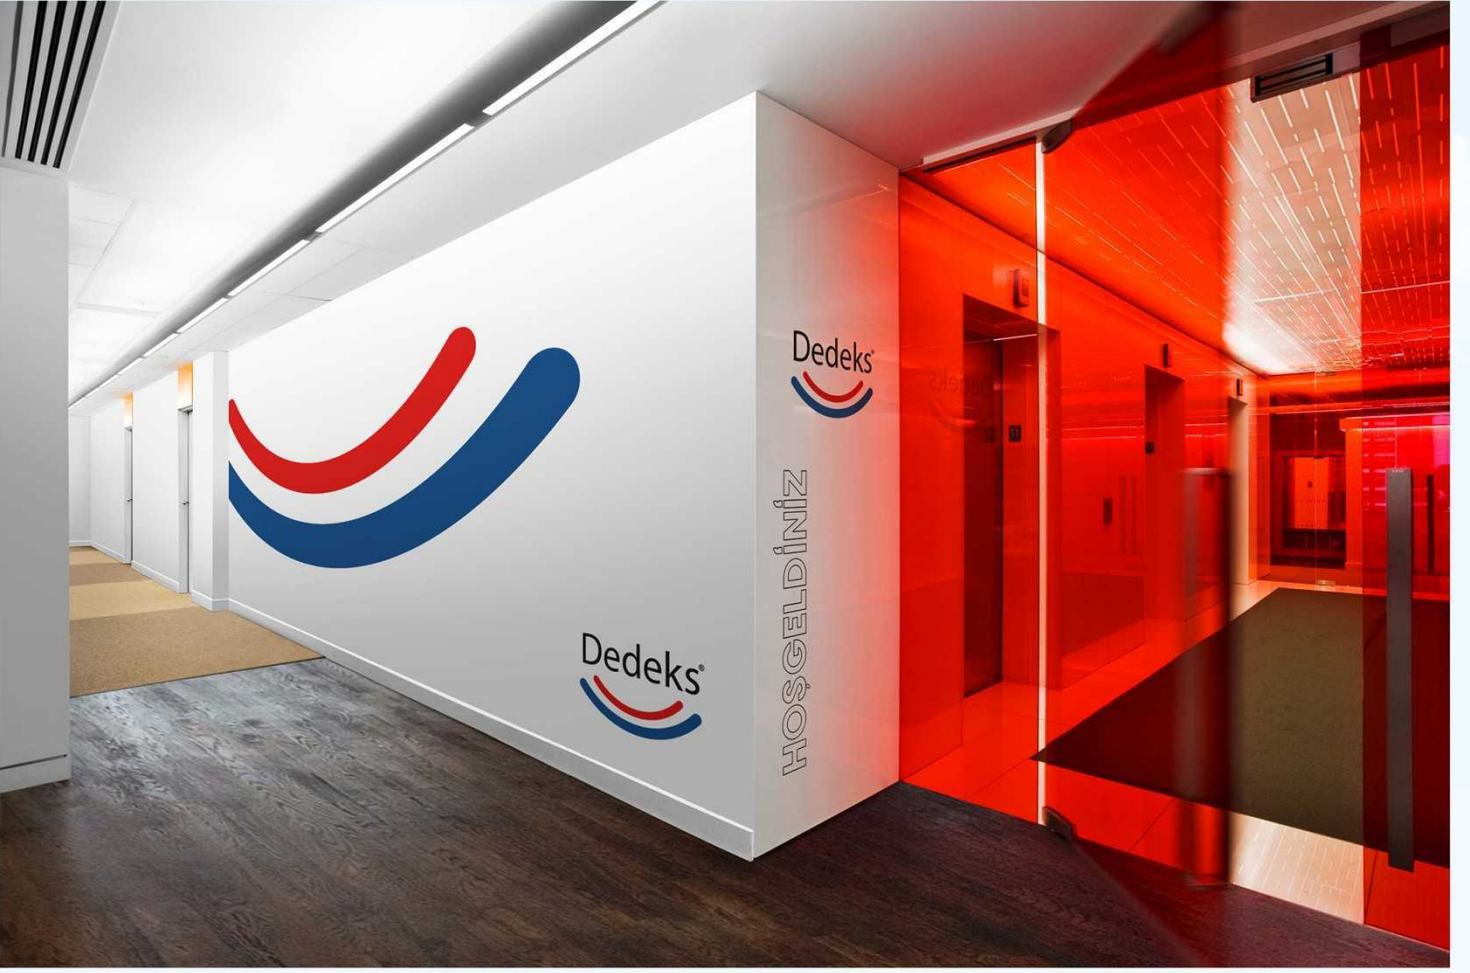

- The tool should be sterilized before and after use
- Prepare the bolus or magnet
- Secure the animal safely
- Slowly and steadily push the piston to allow the bolus or magnet to pass through the animal's throat
- The bolus drenching process should be carried out by a professional veterinarian. Incorrect application may harm the animal's health.
